

Paddle District — Open Play & Queue System Guide

A plain-language walkthrough of how to run a pickleball open-play session with the Paddle District app: adding players, letting the app form balanced matches, feeding them onto courts, scoring, and reading the leaderboard.

The big idea: you add the players who showed up and the courts you have. The app keeps a waiting line ordered by who has sat out the longest, automatically builds 2-vs-2 matches from the front of that line, and you drop each match onto an open court. Enter the score when they finish and everyone flows back into the line.

The four screens

Screen	What it's for
Login	Sign in with Google or email/password.
Dashboard	Create a new session, resume a live one, or open the public View link.
Session manager (the main app)	Your control panel: Players · Courts · Queue · Rankings tabs.
Live View	A read-only mirror anyone can open (or scan via QR) to follow courts, the queue, and standings in real time.

Only the session manager makes changes. The Live View is look-only.

1. Start a session

1. Log in, and on the **Dashboard** tap **Create Session**. 2. Give it a name and date. You land in the session manager on the **Players** tab.

2. Add players and mark attendance

On the **Players** tab:

- Type a name and add each person who showed up.
- Tap a player to toggle **Here** / **Absent**. Only players marked **Here** are put into the

rotation. The header shows a live "N playing" count.

You can add or remove players at any time during the session. Newcomers join the waiting line; people who leave can be marked Absent so they stop being scheduled.

3. Add your courts

On the **Courts** tab, add each physical court you have (for example "Court 1", "Main Court"). Tap a court's name any time to rename it.

4. How the queue builds matches (the heart of it)

As soon as you have **at least 4 present players**, the app pre-forms up to **three** 2-vs-2 matches and keeps them ready. You don't build teams by hand.

Who gets picked first: players are ordered by **who has waited longest** since they last played. Someone who has never played, or who played the most rounds ago, rises to the top of the line. This keeps playing time fair across the whole group.

You can see this on the **Queue** tab:

WAITING QUEUE

Players sorted by longest wait. First in line gets the next court spot.

UPCOMING MATCHES

1r ago

Queue tab: upcoming matches and the waiting line

- **Upcoming Matches** — the pre-built matches waiting for a court. The first is tagged **Next Up**, the rest **On Deck**.
- **Still Waiting** — everyone not in an upcoming match yet, sorted by longest wait. The badge ("3r ago", "Not played") shows how long they've sat out.

The queue rebuilds automatically whenever anything changes (a score is entered, a player is added, attendance toggled). You never have to refresh it.

5. Put a match on a court

On the **Courts** tab, an open court shows a ⚡ **Generate Match** button. Tap it and the **Next Up** match drops onto that court and its timer starts.

Courts tab: an active court with T1/T2 and score entry, a finished court, and Next Up

Each active court shows:

- **T1** (green) and **T2** (gold) — the two teams. The big faded T1 / T2 watermark and the matching labels on the score boxes make it obvious which side is which.
- A running **timer** and the round number.
- A **Next Up** strip at the bottom so you can see who's coming on after this game.

Swapping a player

Need to substitute someone (a late arrival, a sit-out request)? Tap the ⇌ button next to any player on a live court or in an upcoming match, then pick a replacement. The person who comes off goes back to the front of the waiting line.

6. Enter the score

When a game ends, type each team's score into the **T1** and **T2** boxes and tap **Submit Score**. That instantly:

- returns all four players to the waiting line (now at the back, since they just played),
 - updates the leaderboard,
 - records the game in **Game History** with its **duration**,
 - and readies the next pre-formed match for that court.
-

7. The Leaderboard

The **Rankings** tab ranks every player who has finished at least one game. Tap ⓘ **How it's scored** to see exactly what each column means.

Leaderboard with the "how it's scored" panel open

- **Wins / Losses** — the higher-scoring team gets a win, the other a loss; a tie counts for neither.
- **Points** — total points your team scored across all your games.
- **Score Diff** — points scored minus points given up (your margin), shown as + / - .
- **GP** — games played.
- **Win%** — wins ÷ games played. **Pt%** — your points as a share of all points in your

games.

- **Sorting** — pick a metric with the pills (Wins, Points, Win%, Pt%). Players tied on that metric are broken by Score Diff.

8. Game history (and fixing a score)

Below the leaderboard, **Game History** lists every completed game newest-first, with the round, court, **how long the game took**, the score, and the winner.

🏆 Cy & Dan

9 - 11 ✎

Edit Score dialog

Correct the numbers and tap **Save Changes**. The app automatically un-does the old result and applies the new one, so every affected player's **wins, losses, and points update to match** — and the leaderboard re-sorts. (If a player has since left the session, you'll be told their stats couldn't be adjusted.)

9. End the session

When play is over, tap **End Session** (top bar) and confirm. You can export the results to **CSV** or **JSON** first.

Once ended, the courts become **read-only** — no more renaming, removing, swapping, scoring, or generating matches:

Changed your mind? **Continue** re-opens the session and makes everything live again.

10. Share the live view

Anyone can watch the session without logging in:

- On the dashboard or via the **Share** link, open **View** in a new tab — great on a projector or TV.
- A floating  **QR** button (bottom-right) expands a QR code players can scan to pull the live view up on their phones. This now works on phones too:

Live View (phone width)

Courts, queue and leaderboard would render here. The floating QR button now appears on mobile (bottom-right).

× Hide

Mobile live view with the QR button expanded

The View updates in real time: courts, the waiting line, the leaderboard, and the full match history all mirror what you do in the session manager. When you end the session it switches to a final-standings screen.

Quick tips

- **Need 4 to start.** Matches only form once at least four players are marked **Here**.
- **Fairness is automatic.** The longest-waiting players are always picked first; you don't

have to track turns.

- **One scorekeeper.** Run the session manager from a single device. Everyone else uses the View link (read-only) so there are no conflicting edits.

- **Fix mistakes freely.** A wrong score is a two-tap fix and the standings self-correct.
 - **Renaming courts** updates everywhere, including past history entries for that court.
-

Screenshots are illustrative renders of the current UI. The live app may show your own players, courts, and colors.
